

Monitoring Report on Chhimbu Primary School, 06 April 09

By

Namgyal Jangbu Sherpa

Himalayan Project Nepal

To

Himalayan Project Denmark

On 14 March 2009 We (I and my assistance Tika Ram) Reached to Chhimbu School for the monitoring of Chhimbu School reconstruction, It was Saturday and school was off. But we met Jangbu Sherpa one of the teachers and Pasang Tamang, main constructor of the school office and wall reconstruction. So, we went around the construction and checked the quality of the Pasang work. We checked the office room, garden, wall below the road, mud management and furniture which have been completed.

After our joint monitoring we reached to the conclusion that project constructions are quite satisfactory.

Office building reconstruction

Office building reconstruction including mud plaster inside of office wall, stone slate on the floor and roof ceiling has been completed and Teachers have brought it in use. All the office stuffs have been put back and decorated nicely. It looks nice basically but it needs proper clean. Roof ceiling looked little loose and Pasang was going to fix it in proper way.

Wall along with road

Construction of wall along with road is completed. It looks to have been built very much in compact form, less mud and more stone are used. It is built in stepwise form for the longlasting. Breath and depth wall id considerably sufficient. Jangbu, Bimsen and other people who saw Pasang's wark expressed satisfaction over his Job.

New classroom

Wall inside the room is plastered with mud and put very thin color so it doesn't look nice at it should look. It is very much disorganized in side the classroom. The waste things are put inside. Jangbu, Bimsen told me that they are using this room for waste things for temporary and would remove it. They want to bring it in use for nursery classroom very soon.

Mud Behind the school building

Gelbu Chhiri has removed all the mud behind the school building without any support of partner late Dille Thami. He has done a great job. He came up to see me and informed me that He could remove all the mud which were between nursery classroom and the behind wall but mud behind the old building can be removed no more because of weak foundation of both school building and behind wall.

Furniture

Pasang has produce 2 cop board with some shells but Pasang himself is not satisfied with the quality of the wood. I also agreed with him that quality of the wood used for cop board is not good enough. But he can't do better as no good timber is around. They seem to be looking nicer if burnish is put. Pasang is little afraid of Papa Kurt with the furniture he produced. But I found he did what he could do best.

Tree Nursery

There are only few trees in the nursery garden. They are growing up. But now there are lots of spaces for tree nursery garden when construction work is completed where they can make a nice garden Plants many different kinds of trees and flower to make school surrounding beautiful. Jangbu told me that they are looking for some plants and seed of flower for the garden.

Picture of Scholars after scholarship and Account Book are distributed.
