

# **Project Monitoring report of Pikey Secondary School**

**22<sup>nd</sup> September, 2008**

**Submitted to Himalayan Project Denmark (HP-DK)**

**By**

**Namgyal Jangbu Sherpa**

**Himalayan Project Nepal (HIPRON)**

Loding School reconstruction, which was started in 2006, is going to be completed. Major things are completed and some minor things have left, among which: sufficient of water supply in the toilet, fixing water tank and urinal tank, complete finishing of the garden, reconstruction of the fallen wall and repair of some desks and benches.

## **Compound wall**

Compound wall by the side of the road was completed in April 2008, but approximately 4 meter wall was collapsed in between due to its weak foundation, that is going to be reconstructed again.

Length of the wall is 38meter before the entrance gate and 11meter after the entrance gate, 0.70 meter height in average and 0.55meter width. I suggested Krishna to plant the grass on the top of the wall but it is too late this year. This wall does not seem to be lasting for long as foundation of this area is loose.

## **Front Garden**

According to the Krishna, the construction of front garden is completed but I didn't see this garden is like a garden, rather it is more like supporting wall for the behind wall. May be it can be seen better when the garden is planted with the flowers. School has planted some flowers but most of the area of the garden is empty. I asked Krishna put more effort on the overall project to make better completion. School has also made garden before the toilet. It looks nice and beautiful. Some different flowers are blooming.

## **Furniture**

The quality of the desks and benches is not satisfactory; some of them already started trembling. School has made 37 pairs of new desks and benches but I could hardly recognize 16 pairs which are new. I asked Krishna to repair all of them including the old. He agreed to make them better and stronger.

### **Toilet Construction**

Construction of the toilet has been completed but water tank and urinal tanks are yet to be fixed, however, water has supplied in the toilet. Krishna told me that all projects, including remaining work of toilet, will be completed before Papa Kurt arrives in autumn. Toilet has already opened for use but children are not using toilet, rather they are using surrounding area to go to stool. When I was there one teacher was rushing to the vicinity of the toilet with the bucket of water to cleanse but no avail. I was asked not to take picture of it. I asked teacher to teach student and make them utilize the cozy toilet.

### **School upgrade for secondary level**

This school has been upgraded as a secondary school after it receive approval letter from the regional education office for running as a secondary level and sufficient support from District education office (DEO). It has supported with 1 additional teacher and Rs.600.000 for two buildings. Previously the school had been running as a lower secondary school. Nepal Government has a plan to establish one secondary school in each VDC (village development committee). From the current academic session, school has started class 9.

School has already completed the construction of one building for DEO support and is planning to construct the another building for the rest of the money.

### **Conclusion**

I have monitored the projects thoroughly with the construction chairman Mr. Krishna on 27 August 2008. We made some conclusions that Krishna will complete the remaining project with high standard before HP-DK Chairman will visit the school in autumn. Construction Chairman will hand over the completed project to the School Management Committee officially and make the account public in the presence of HP Chairman.
