

Mount Everest English Secondary school
Computer Project Monitoring Report, 20th September 2008
Submitted to Himalayan Project Denmark

By
Namgyal Jangbu Sherpa (HIPRON),
Lazimpat, Katmandu, Nepal

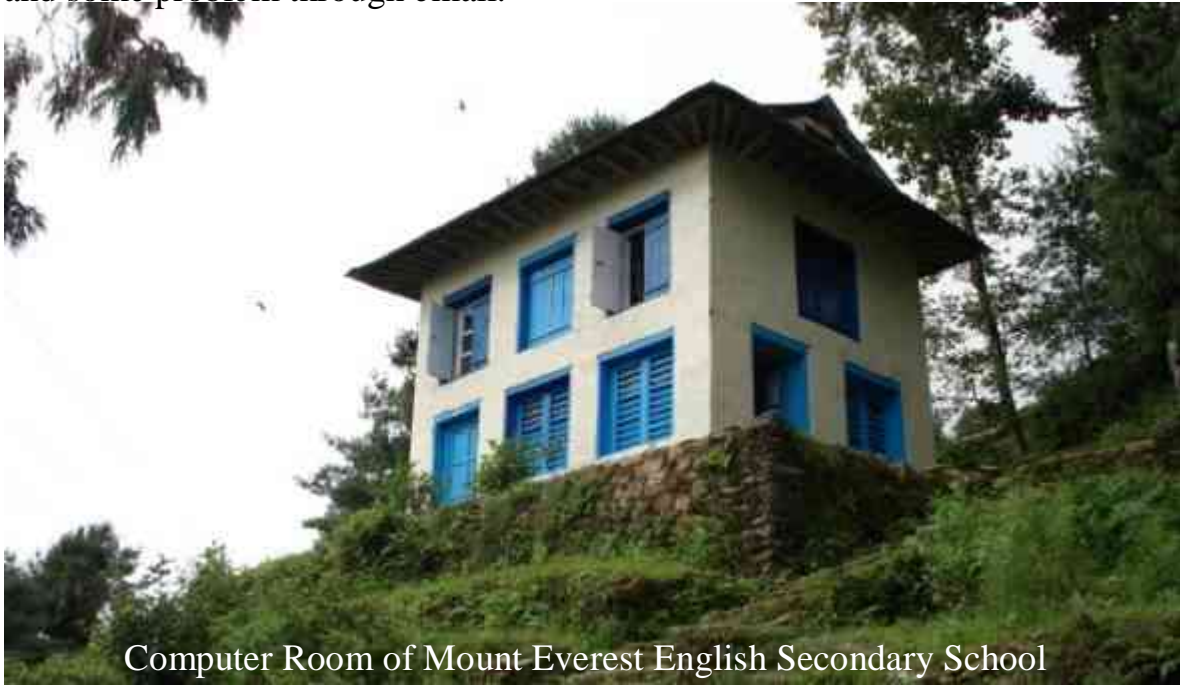

Mt. Everest English Secondary School (MEESS) was donated 6 computers by Vinderup Rotary Klub District 1440 Denmark last year for the educational purpose. This computer project was facilitated by Seagate Computer Institute Kupandol through Rotary Club of Lalipur, Club no 50801, District 3290 Nepal.

Ever since, the students above Class 5 of the MEESS have got the opportunity to get familiar with the computers. MEESS has incorporated computer class and has been giving computer education both theoretical and practical on the basis of routine wise system. Probably, MEESS is the first and only the school which gives computer education to the students at school level in Solukhumbu district. When Students of the MEESS will complete their school level education they also will have learnt many things about computer. Presently around 200 students of MEESS are having computer education. Due to the computer education, number of student of MEESS has gone up by 10% this year only.

Now there is internet connection with one of the computers but its speed is quite low. It isn't supporting to open the homepage due to the low speed but support for the email.

This Project has regularly been monitoring by Himalayan Project Nepal (HIPRON) at request of Himalayan Project Denmark (HP-DK). Last time I was there on 5th September 2008 to check the computer how they are working. I checked all the computers and found one of them is very slow, some computers give some information, like ñinsert bootable disk and press

any key to startö. Two monitor produce buzzing sound and some time they produce sound with spark inside it. One mouse never functioned, and the entire mouse lacks the mouse pad. Otherwise the rest are fine with the computers. I think Seagate can solve some of the problem on the telephone and some problem through email.
